

IS YOUR DATA IN EXCEL HELL?

75 percent
of CRE firms are relying on spreadsheets and other non-integrated data management solutions

\$11 trillion
of CRE assets are managed in error-prone spreadsheets

66 percent
of firms surveyed believe improving their asset/portfolio management decision-making would make a big impact on investment returns

The cost of Excel hell ...

Wasted time
Without an integrated strategy companies can spend hours just trying to manage their data.

Increased risk
There is operational risk in too few employees knowing how to access your data, and reputational risk from reporting erroneous numbers.

Increased headcount
If your data is decentralized, it takes more people to sort through it and find what you need.

Painful reporting
Systems that don't talk to one another – multiple, error-prone, unsecured spreadsheets containing essential pieces of data – too many silos – too many employees spending too much time creating reports. It's just painful!

It doesn't have to be this way.

70 percent

of firms want data and metrics to benchmark how they perform against the market

77 percent

of firms want to prioritize investment technology to support asset/portfolio decision-making

“We performed an exhaustive survey of the real estate technology market, and we selected Saxony Partners. Their approach, their technology, and their focus on the real estate industry vertical made it the right decision for us.”

CFO of \$1+ billion AUM real estate private equity firm

We can cut your investment reporting time by as much as...

90 percent

And we will turn your data into a competitive advantage
